# Brazilian Journal of Morphological Sciences

*The Brazilian Journal of Morphological Sciences will now provides comprehensive coverage in the fields of molecular, cellular and functional morphology.*

The *Brazilian Journal of Morphological Sciences* has expanded its areas of coverage to include a much wider spectrum of morphological sciences at all levels of organization, from molecular and sub-cellular morphology to traditional studies of macroscopic organization associated with normal and pathological conditions. The journal will continue to accept papers that are essentially morphological in emphasis, i.e., those that provide a good structural description of the anatomy and/or histology of systems, organs, tissues, cell types in microorganisms, invertebrates and vertebrates. The editorial board has been altered to reflect the range of subjects that will now be covered by the journal, and may be modified periodically as the need arises.
